Matcha Powder is a powdered product made from ground tea as raw material, which is ground, crushed, mixed, screened, and packaged. It can be directly brewed for consumption or used as an ingredient in the food industry. It has the aroma and taste that the product should have, with a seaweed aroma, and a fresh and mellow taste. Matcha Powder is widely used in Bake, Beverage, Drink, Daily Food, chocolate, Sweet food, ice cream as well as the functional food ingredients.

Kombucha Powder

Kombucha, also known as black tea fungus, is a beneficial substance produced to human body after fermentation with sugar, tea and water. It is a common organism (SCOBY) of yeast, lactic acid bacteria and acetic acid bacteria. The bacterial membrane is similar to jellyfish skin, so it is called "sea treasure". Known as: "immortal drink", has the role of beauty, health care and longevity. Black tea fungus can not only clean the stomach and intestines, promote digestion; regulate blood lipids and blood sugar, but also improve brain vitality, eliminate fatigue, and improve human immunity.

Tea Extract

Tea Polyphenols are the general term of polyphenols in tea, which have strong antioxidant and scavenging free radicals, as well as antibacterial, deodorization and anti-cancer effects.

L-Theanine is a unique amino acid of tea, which can be used as a flavor modification of green tea. It can also inhibit the bitter taste and astringent taste in other foods and improve food flavor. Can reduce blood pressure and calm the mind, fight fatigue, relax nerves, reduce cholesterol in the body.

EGCG is a catechin monomer isolated from tea leaves and is the main component of the bioactivity of tea polyphenols. It has antioxidant, anticancer, antimutation and other activities. Also has the effect of dissolving fat, melting turbidity and removing oil.

Recommend Spec.: EGCG 98%, GABA 20% / 98%, Theanine 98%

Instant Tea Powder And Tea Powder

Extract its contents (polyphenols, amino acids, caffeine, etc.) with fresh tea leaves or dry tea (low agricultural residue or organic tea) as raw material through 85°C water for about 3-6 hours, and then the tea soup is filtered, concentrated and sterilized, and then dry it after cooling to make instant powder. It is widely used in solid, liquid drinks, pastry, candy and other food and health care products. Its source is natural and safe, no solvent contact, soluble in water, convenient to carry, suitable for all kinds of people.
